The genes SLC1A2, SLC1A3 and GPI were not present in the Initial list of 108 genes with a lower expression level in CA1 (supplementary material 1), because the cut-off was set at a fold change of 2 and a statistical correction for multiple comparisons (Benjamin and Hochberg, 2005) was applied to select that group of genes. Statistical analyses performed on the microarray data derived from individual probes for these genes were consistent with the Taqman® RT-PCR data and revealed a differential expression in CA1 as compared to every other region.

Correlation Matrix between Taqman® RT-PCR and Affymetrix® U133 microarray analyses of gene expression

TaqMan® Assay ID and Affymetrix® ProbeSet ID are listed adjacent to the Gene Symbol
