

SUPPORTING INFORMATION

Footprints of past intensive diversification and structuring in the genus *Zelkova* (Ulmaceae) in south-western Eurasia

Camille Christe, Gregor Kozłowski, David Frey, Sébastien Bétrisey, Elmira Maharramova,
Giuseppe Garfi, Stergios Pirintsos and Yamama Naciri

Appendix S1 The institutions and number of *ex situ* individuals of *Zelkova schneideriana*, *Z. serrata* and *Z. sinica* used in this study.

Abbr.	Institution	Country	<i>Z. schneideriana</i>	<i>Z. serrata</i>	<i>Z. sinica</i>
HILL	Sir Harold Hillier Gardens	UK	1	3	1
MOAR	Morris Arboretum	USA	1	2	1

Appendix S2 The name, sequence, annealing conditions and source of primers used in this study. PCRs were performed in a 20- μ L total volume with 0.12 μ L of 5 U μ L⁻¹ Taq (Roche, Basel, Switzerland), 25 μ M MgCl₂, 10 μ M of each primer, 0.2 mM of each dNTPs, and 0.85 μ L of template DNA. ITS1 and ITS2 were amplified under the same conditions with minor modifications (2 μ M MgCl₂ for both regions and the GC-rich buffer for ITS1). All the PCRs were programmed for an initial denaturing step at 95 °C for 6 min, 35 amplification cycles (30 s at 95 °C, 30 s at the appropriate annealing temperature, an elongation step of 45 s at 72 °C for *trnH-psbA* or 90 s at 72 °C for *trnL*, ITS1 and ITS2), and a final step of 4 min at 72 °C.

Hap., haplotype; freq., frequency; Zab, *Z. abelicea*; Zca, *Z. carpinifolia*, Zsc, *Z. schneideriana*; Zse, *Z. serrata*; Zsic, *Z. sicula*; Zsin, *Z. sinica*. The mutation numbering starts at the end of the *trnH* primer at position 537 of the complete tobacco chloroplast genome (Shinozaki *et al.*, 1986), with the following notations: ID, indel; IV, inversion; D, duplication; TS, transition; TV, transversion. Question marks '?' correspond to indels for which the mutation state could not be defined.

(b) The substitutions and indels in the chloroplast haplotypes at the locus *trnL* in six species of *Zelkova* from across Eurasia. The number of individuals and the species identity are given for each haplotype.

The mutation numbering starts at position 49,376 of the complete tobacco chloroplast genome (Shinozaki *et al.*, 1986) with the following notations: ID, indel; IV, inversion; D, duplication; TS, transition; TV, transversion.

(d) The substitutions and indels for the nuclear ribotypes at the locus ITS2 for *Zelkova abelicea* (Zab), *Z. sicula* (Zsic) and *Z. carpinifolia* (Zca). The frequency and the species identity are given for each ribotype. Mutation positions are numbered from the end of the forward primer 3 of White *et al.* (1990).
